

## AdIER Overview

The winning edge is very critical for any organization in today's business world which has become very competitive. For an effective output, an ERP framework should flawlessly merge information from one department to another and should address the needs of the organization to reduce costs, improve overall customer service, enhance company performance and facilitate growth. AdIER does exactly this and ensures that the financials, human resources, sales, procurement, inventory management, logistics and reporting systems are dynamically improved.

AdIER is an integrated enterprise resource planning application framework designed specifically to meet the operational needs of single or multiple companies, small to large sized trading houses and manufacturers. With well covered and extended functionalities, excellent user interface and rapid implementation, AdIER is a comprehensive solution with low total cost of ownership. AdIER is flexible, mature, feature-rich and fully integrated business information system that helps you take control of all your business needs. Available with Client server and Web based versions with different variants, AdIER can address the business situations of small sized companies with single location user to corporates with multi location users.

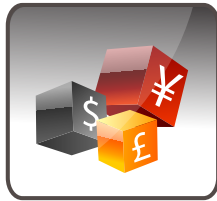

## ADLER advantages for your organization

AdIER provides a fully integrated business process framework that has all industry standards and best practices built in its functionalities. Our implementation team starts off with a detailed system study and process mapping at your site and interacts with the stake holders. The AdIER framework can be customized for any specific process requirements by our onsite and offshore development teams. The customization flexibility of AdIER assures that the users can go live with a very short training process. AdIER supports multi company transactions in all modules. The hierarchy can be set as a holding company and divisions under the same. MIS reports can be generated for the group as well as for the individual companies. The business intelligence tool FTC of AdIER is a unique feature that stands out as an effective control mechanism for business owners.

## Business Intelligence (BI) Tools

### Fast Track Controls (FTC)

Fast Track Control tools delivers the information and in-depth analysis that the top executives need to improve the profitability of their firm and intelligently adapt to changing business conditions. The solution helps the firms to quickly develop accurate business plans and ensures that their professionals stay focused on achieving their strategic objectives. AdIER is equipped with Business Intelligence (BI) capabilities which include dash board displays for online data display, SMS alerts based on pre defined events, touch screen monitors for easy data accessibility etc.

#### FTC Mobile Alerts

FTC mobile alerts delivers vital information regarding the health of the organisation to the company executives and thus increases the productivity and effectiveness of the firm's professionals, even if they are traveling or just away from the desks. The solution allows professionalsto accurately capture time, manage expenses, and remotely access vital information from their firm's financial management system. The information required to be sent to specific mobile numbers can be set in the FTC module.

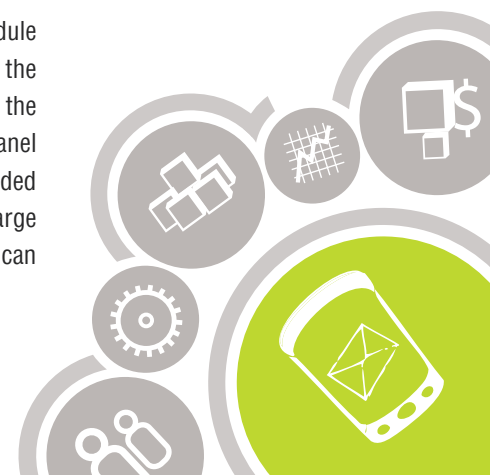

#### FTC Plasma Display

A top level executive would prefer to have an online display of information right in front of him without taking the effort of logging into the system and searching for the report that he wants. The FTC Dash boards provide this unique facility through the FTC module. The required MIS reports can be selected and can be present in the screen through this module. The program will fetch the live data at a pre defined interval and will display on the dash boards at regular intervals.

#### FTC Touch Screens

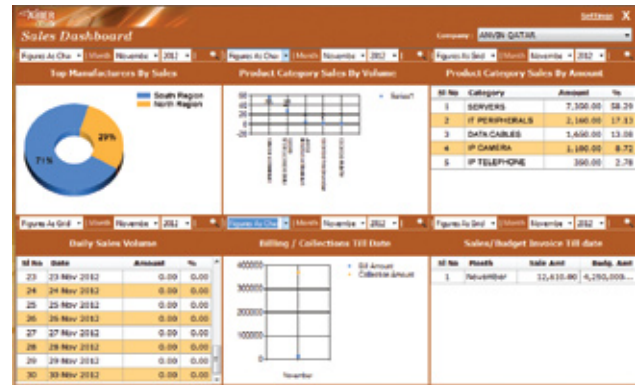

The touch screen interface of the AdIER FTC module provides facility to view the MIS reports through the desktop touch panels. Here the user can select the report that he would like to see from the selection panel buttons. The FTC touch screen module can be extended to provide the employee information in camps, or large manufacturing centers, through which the employee can view their personal and accounts information.

## Application Dash Boards

The dash boards are the direct performance indicators of the organisation, and it is a vital Business Intelligence (BI) tool that is required for any company. ADLER comes with various dash boards which provide data to the users and decision makers. Adler has option to set dash boards in all the modules and the configuration tools helps the system administrator to set up dash boards to users based on the user levels, hierarchy, company settings, module access etc. Within the dash board tool there is setting options to set the graph type, display type etc, which the user can set.

## Alerts

Adler has a unique feature of system alerts which keeps the user always aware about the priority tasks to be completed. Every module has got the alert functions which can be set based on the user permission settings. From the alert screen, there is option to drill down and see the details without going into the corresponding reports. For example, in Procurement department alerts, if the systems show 20 purchase orders pending for delivery, the user can drill down and see the details of all the 20 Po's. There are options to set the configuration parameters like the frequency of alerts, advance information time frame, minimum / maximum value settings, etc.

Alert Name	Count
PURCHASE REQUESTS - NEW	12
PURCHASE REQUESTS - NOT APPROVED	126
PURCHASE REQUESTS - NOT ORDERED	17
PURCHASE REQUESTS - HOLD	1
SUPPLIER ORDER - NOT APPROVED	22
SUPPLIER ORDER - NOT ACKNOWLEDGED	543
SUPPLIER ORDER DUE - LOCAL	429
SUPPLIER QUOTATION REQUEST - DUE	126
PURCHASE FORWARDING NOT ASSIGNED	152
PURCHASE REQUESTS - NOT ACTION TAKEN	18
COMP - NOT ORDERED	268
SUPPLIER ORDER DUE - INTERNATIONAL	132

## To Do List / Organiser

Communications between the users of Adler is possible through the to Do List feature available in Adler. The users can send / receive information to other users regarding some important notes, clarifications etc which are related or not related with Adler functions. The user can choose multiple users at the same time and assign the tasks. Reminders can be set in the system which will give advance information to the users regarding the task.

The screenshot shows the 'To Do List' interface with the following details:

- Task:** INTERNAL REVIEW MEETING
- Start Date:** 17-Nov-2012 09:57 AM
- Due Date:** 17-Nov-2012
- Priority:** Normal
- Reminder:** On Time, Recurring
- Start Date:** 17-Nov-2012 11:00 AM
- Owner:** Steve Johanson
- Details:** Internal review meeting for the running projects at meeting hall
- Assigned Users:**

Sl No.	Staff No.	Name
1	01253	Saeed Khalifa
2	01170	James Jacob
